

For Immediate Release:

Rehab Ideas Rolls Out First Mobili T Rover™.

Tampa, Florida April 27, 2009 – Seven years ago, Michael Foradori of Mississippi was disabled in an accident leaving him paralyzed. Earlier this year, one of Michael's friends stumbled across the Rehab Ideas website and found the Mobili T Rover™ and immediately thought of Michael. He called Rehab Ideas excited about the possibility of Michael being able to do the things he misses most such as going to the beach and hunting. Today, Michael receives the first Mobili T Rover™ and will soon be back to doing the things he loves most.

The concept of the Mobili T Rover™ stems back to a few years ago when students from the Engineering Capstone class at the University of South Florida were asked to devise a college engineering project that would help people with disabilities. Travis Watkins, a student in the class, said the first person who came to mind was his father, who once cherished walks along the beach.

The Off Road platform of the Mobili T Rover™ makes those dreams come true. The base platform is powered by the wheels of a power wheelchair, but its rugged construction allows the user to access outdoor recreational areas that are typically not accessible in a standard wheelchair. Beaches, parks and wilderness areas are no longer a challenge and no modifications to the wheelchair are needed.

Imagine the possibilities of becoming more independent and at the same time, having the "cool factor" on the one of a kind Mobili T Rover™. The design of this platform has the look of an all terrain vehicle or dune buggy with its sleekly designed fenders, roll bar and 24" tires and rims.

The young men and women that come back from war that are treated at the James A. Haley Veterans Hospital in Tampa, FL want and need the latest technology and they want it now! Rehab Ideas has many products that are ready for market that meet those needs.
